Each day we wait will
add to the bill of
future generations**

**Sustainable water
management is a
bottom-up process
with everyone
involved**

Liesbeth van Dijk

Partij van de Arbeid

PvdA

Dutch Labourparty PvdA

Will prioritise giving
the water board as many opportunities as possible to work for
climate and environment.

They have the power and the knowledge to take the initiative.
Water board is an executive organisation

The costs will be fairly divided as taxes.
For people with <130% of the minimum income we ask for
exemption from taxes.

This way we are **green** and **red** at the same time.

The Green Party wants to close the floodplains behind the new dike completely for people. No swimming, no hiking, no birding allowed.

PvdA wants to create opportunities for small scale recreation like hiking, swimming and fishing.

Of course nature-friendly recreation. We are convinced that this stimulates the love of people for the surroundings of the city. People who can enter nature, see the beauty, will keep it clean and take care of it. This will improve the acceptance for spending so much money on nature.

Hope we can “polder” (=Dutch negotiating) this.

Why vote PvdA?

- We want to give extra attention to the climate in the cities, especially in those parts with social housing, to prevent people suffering from heat stress.
- We prefer to invest in innovation instead of conservatively sticking to the basic tasks.
- We will guard that the taxes for the inhabitants will be reasonable. Especially with new laws in the making we must remain vigilant.

LIST 1, CANDIDATE 2

**WATERBOARD VALLEI &
VELUWE**

Vote on Wednesday 20 March!

For Regional Water Board Vallei & Veluwe

**KIES
VOOR
DOEN**

Do you also find it important that:

**KIES
VOOR
DOEN**

We remain committed to clean surface water, safe dikes and, where possible, introducing innovative technologies into the many sewage treatment plants in our region.

The themes that are important for the VVD are;

- The Grebbedijk is being thoroughly dealt with so that we can also attend high water level have and keep dry feet.
- The port in Wageningen must be safe for water sports enthusiasts and company's
- Remains of medicines and plastics do not belong in the water and need to be removed by the water board with the application of the latest technologie

Q&A

Proposition #1

When the water needs for nature and recreation clash (for example in the case of the Grebbedijk), nature should always be given priority

Proposition #2

Water boards should invest more in innovation (for example in recycling waste water or urban water systems), and therefore households should pay a higher tax.

Proposition #3

When the water needs for nature and agriculture clash in a certain situation, agriculture should always be given priority
